PRODUCT PROFILE

P618619 Gasket Quick Release Dust Cup

Gasket upgrade for SRG20, SRG29, and SSG quick release dust cups.

P618619 gasket is designed to easily snap-fit on the existing body of the cup and therefore is a simple retrofit solution to upgrade the standard sponge gasket. Simply remove the old foam gasket and fit P618619 with the notches to the inside of the cup and you are ready to go.

The use of this gasket ensures there is no back flow of air between the trapdoor and cup. This seal is critical in maintaining the pre cleaning efficiency of the Donalclone or cyclone tubes resulting in greatly extended filter life.

APPLICATIONS

Donaldson's quick release style dust cups make the monitoring of both the condition of the Donalclone tubes as well as contaminant levels in the bottom of the housing much easier and less time consuming because of the larger viewing area.

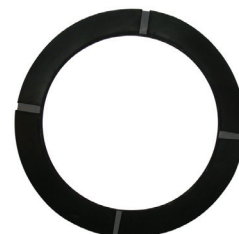

When operated in harsh conditions, the constant opening and closing of the dust cups for service could result in the standard foam gasket becoming worn or dislodged as can be seen in the photos below.
